

Environmental Management Policy

[Environmental Management Policy]

1. DY AUTO strives to reduce and manage greenhouse gas emissions and pollutants throughout the entire product lifecycle—including development, production, sales, usage, and disposal—by utilizing resources and energy efficiently.
2. We contribute to sustainable corporate growth by establishing, operating, and continuously improving our environmental management processes.
3. We actively support environmental education to raise employee awareness of the global environment and promote the conservation of natural resources through responsible water use and management.
4. We are committed to preserving biodiversity through sustainable land use and environmental conservation efforts.
5. We comply with domestic and international environmental laws and agreements and practice transparent management by disclosing our environmental performance.

[Environmental Management Code of Conduct]

DY AUTO is committed to strict environmental controls during all business operations—including product design and production—to reduce environmental pollution and prevent environmental accidents.

We comply with relevant environmental laws and regulations regarding air emissions, raw materials, chemicals and hazardous substances, waste, recycling, water usage and discharge, and greenhouse gas emissions.

Through this compliance, we aim to minimize environmental impacts and protect local communities. We also actively communicate and cooperate with stakeholders to respond to environmental and sustainability-related expectations.
